SAI Partners Showcase MindStream Monitor at Las Vegas MACNA Conference

Las Vegas, NV — Step Ahead Innovations, Inc. (SAI), creators of the groundbreaking MindStream Monitor for high-end reef aquariums, partnered with three prominent aquarium supply firms to showcase working prototypes of the much-anticipated MindStream Monitor to attendees of the 2018 Marine Aquarium Conference of North America (MACNA) in Las Vegas, Nevada.

The MindStream Monitor provides a fully automated solution for aquarists to perpetually monitor and balance ten water parameters. In contrast to other products, it takes no water from the tank, produces no toxic liquid waste, and requires no reagents or test strips.

Three partner companies featured the MindStream Monitor in active use in their salt water aquariums on site at MACNA. “We are incredibly grateful to these partners for agreeing to help showcase the MindStream Monitor in action,” said Brian Degen, CEO of Step Ahead Innovations, Inc.

Joe Caparatta at Unique Corals ran one unit in a tank with a living stock of coral pieces ("frags"), which Unique Corals offers to saltwater aquarists for addition to their reef tanks where the corals thrive and grow as they do in the wild.

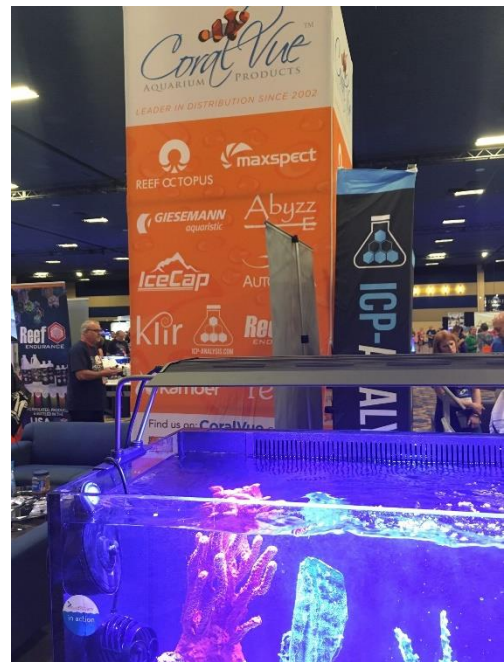

EcoTech Marine displayed the MindStream Monitor in action in their own reef tank. EcoTech offers technologically advanced products such as Radion LED lighting and Vortech and Vectra pumps to aquarists worldwide.

CoralVue showcased the MindStream Monitor in their tank, a miniature reef of varied corals. CoralVue is a leading distributor and OEM manufacturer of aquarium supplies for home aquariums, public aquaria and commercial aquaculture.

SAI, which has developed the MindStream Monitor over the course of several years, is turning its focus from research and development to manufacturing in order to bring the product to market in the near future.
